

Field Client Management

Executives log every shop visit with photos, location, and conversation notes. Managers see the pipeline, follow-ups, and area coverage. Built for retail, F&B, clubs, and industrial accounts — responsive web now, mobile app next.

SUGGESTED REPORTS

Ideas beyond what you asked for

Route efficiency

Avg km per closed deal, suggests better route planning.

Conversation quality score

Length of notes / voice notes vs win rate.

Stale accounts

Won clients with no touch in 90+ days — churn risk.

Area saturation

% of eligible shops in an area we've visited.

GST anomaly log

Duplicate / invalid GSTINs flagged for admin review.

OFFLINE-FIRST - Every form auto-saves as a local draft. When signal returns, drafts sync in the background with conflict resolution on the server. Photos and voice notes queue separately as text-only visits sync fast.

Next steps - Confirm module split for backend (Auth, Clients, Visits, Reports) - Decide on map provider (Google / Mapbox / OSM) - Pick offline-sync strategy (IndexedDB + service-worker queue is recommended) - Choose SMS / WhatsApp provider for follow-up reminders.
